

three involutions of the eternal hole, and only one can be the fold

$$N: (U,V) \rightarrow (-U, -V)$$

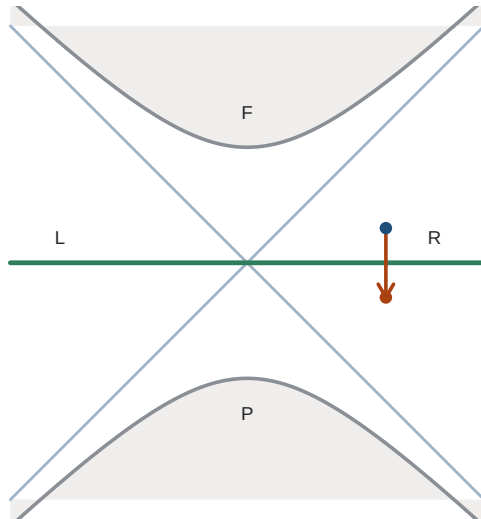

reverses time orientation and carries our exterior to the other one: the fold

$$S: (U,V) \rightarrow (V, U)$$

preserves time orientation, so CPT excludes it: this is the RP^3 geon

$$SN: (U,V) \rightarrow (-V, -U)$$

sends each exterior to itself, so there is no mirror sheet for it to make
