

Two CPT-related branches, one retained quantum algebra

INTERPRETIVE SCHEMATIC

DERIVED

Shared average/difference algebra

stated causally disjoint free-field pairing

average field

$$\Phi_c = \frac{1}{2}(\Phi + \Theta\Phi)$$

classical Gaussian marginal

difference field

$$\Phi_q = \Phi - \Theta\Phi$$

retains the quantum conjugate

$$[\Phi_c, \Phi_c] = [\Phi_q, \Phi_q] = 0 \quad [\Phi_c, \Phi_q] = i\Delta$$

OPEN · interactions

The drawing is interpretive; the lower algebra card states the demonstrated free result.
