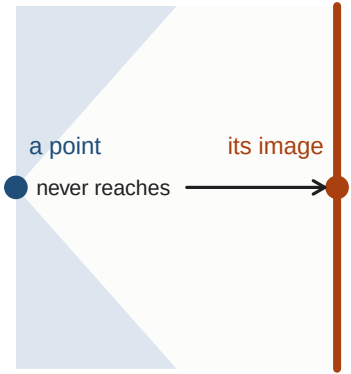
Where the two sheets can touch, and where they cannot

OUTSIDE any horizon

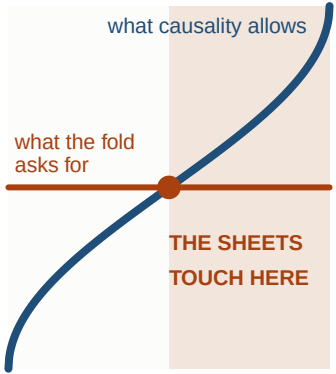
the sheets are silent, always



light cones fall short of the antipode

INSIDE a hole with a past

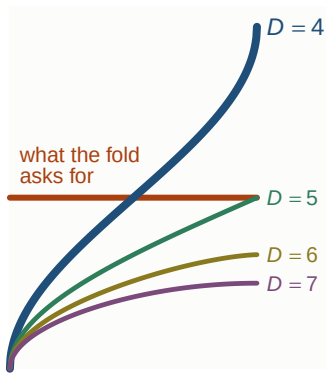
its inner half is reached at any charge



horizon on the left, singularity on the right

and ONLY in four dimensions

five touches the line and never crosses



nothing was tuned to arrange that

A CPT−folded universe is sealed at every horizon by a theorem, and opens in one place only:
inside a black hole that has a past, in the inner half of an uncharged one.
