one state is left massless
zero when the rule is exact;
at most
2.1 × 10−55 eV when
weakly broken
the two
measured
fifty−three orders of magnitude
so it stays massless for anything
an experiment can reach
10−55
10−45
10−35
10−25
10−15
10−5
neutrino mass (eV)
and the sum then has nothing left to choose
0
m1
8.68
m2
50.1
m3
Σmν = 58.78 ± 0.32 meV
m2 and m3 laid end to end: the two
splittings fix the sum once the third mass is zero
0
20
